

The \$AUD10,000 Monetary Challenge!

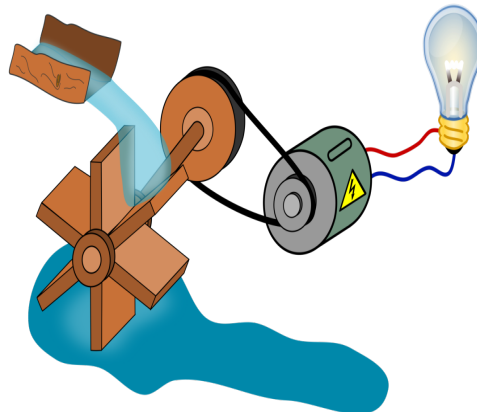

Would you prefer our present debt-based monetary system, where a \$1 loan, bearing 6% annual compound interest, calculated daily, over 550 years, creates a debt of 214 trillion dollars?

A monetary system where 75% of the peoples' labour is lost to the four financial demons, those of debt, interest, taxation, and inflation!

Alternatively, would you prefer an Asset-Hydro monetary system, based upon life-force, a power given freely from the cosmos, the same monetary system already used by the other two million species upon our planet? When we use an Asset-Hydro monetary system, the people retain 100% of their labours, and a \$1 loan, at 0% annual compound interest, calculated daily, over 550 years, creates a liability of only \$1!

Have you ever seen ant colonies collapsing through debt, interest, taxation and inflation?
