

The Monetary Journey!

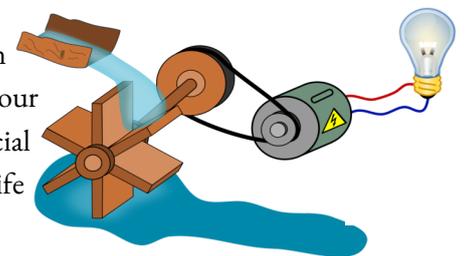

Slavery was once a form of money, with bondage imposed to extract the slaves' life force. However, slavery comes with high security costs, it is a violent business, and slaves must be housed, fed, and medically treated.

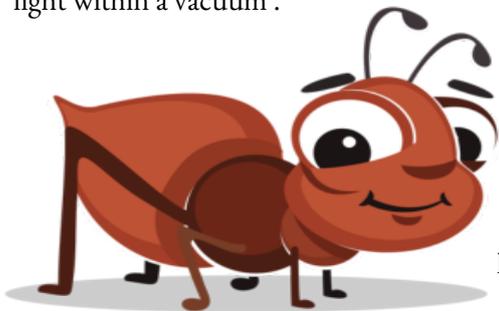

A higher form of slavery had to be invented and it came in the form of usury, the creation of the monetary supply as private debts, bearing compound interest. It came in the form of deception and fraud, with the bankers claiming that they loan pre-existing bank capital, when they only loan bank credit, created by monetising their customer's assets, in a banking mirror called double-entry bookkeeping. It is a swindle which has given the bankers the power to 'steal the world, with a dollar created from nothing', it is a financial crime which has left almost every nation upon our planet facing financial ruin. It is a crime against humanity, a crime revealed by a child's question, 'who supplies the capital for our loans, when the world is drowning in debt?' The answer, the capital is created as a reflection of the customer's own collateral!

There is, however, a higher dimension to money, almost unknown to humanity, even though this monetary system is already used by the other two million species upon our planet, species who create complex communities without using the four financial demons, those of debt, interest, taxation, and inflation. These communities use life force as their monetary unit, a power given freely from the cosmos.

We too could define money as 'life force traded within a marketplace'. The measure for money becomes 'the distance that a typical human being, walking at the normal speed of 5km/hr, will cover within one hour, that is 5000 metres. This is a measure of human physiology, human psyche, time, distance, and the speed of light, as a metre is a measure of the speed of light within a vacuum'.

We can now monetise the potential labour for our nation, projected for the year ahead, to create an asset lake within the heart of our nation, a lake which can be released through the turbine of the Treasury, to power our economy, free from debts. In the Australian example, 25 million people, times \$20 an hour, times 40 hours per week, times 50 weeks per year, creates a one trillion dollar asset lake.

This monetary system fulfils Aristotle's five attributes for authentic money, to be portable, durable, divisible, easily recognisable, and intrinsically valuable. This monetary system fulfils the economists' dream for a monetary system which is 100% reserve and operates using the minimal technological costs, those of debt, interest, taxation, and inflation. This monetary system monetises the commons, the great beating heart of our nation. This monetary system is a technological advance, similar to moving from medieval oil lamps to electric power and electric lighting.

Using this asset-based, hydro monetary system, we can now power our nations free from debt and usury. Welcome to the financial future!
